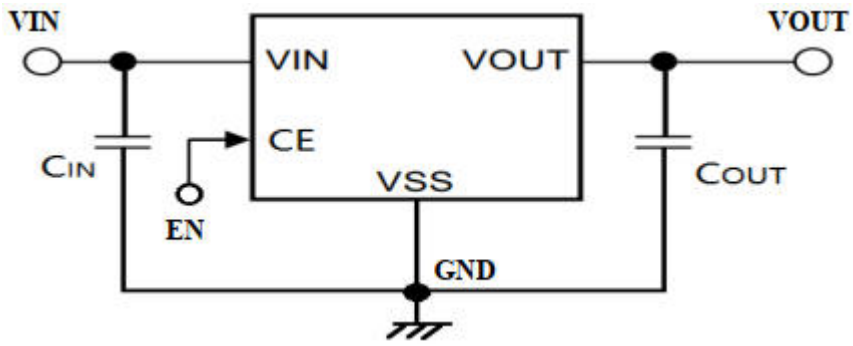
Application Circuit

Basic Circuits



1. C_{IN} is used to stabilize the input capacitor.
2. C_{IN} eramic capacitors greater than or equal to 1pF can be used for COUT.

Function Description

MIC5219 series are linear voltage regulator ICs withstanding 20V voltage. The series IC consists of a voltage reference, an error amplifier, a current limiter and a phase compensation circuit plus a driver transistor. The output stabilization capacitor is also compatible with low ESR ceramic capacitors.The over current protection circuit and the over voltage protection circuit are built-in. The protection circuit will operate wheb the output current or input voltage reaches limit level.
